## **LISTING OF CLAIMS:**

Claim 1 (Currently Amended):

A data communication system comprising:

a main station;

one or more substations, each of which is connected to said main station by a common transmission line;

<u>a data transmitter</u> means for transmitting which transmits data address to all <u>of said one</u> or more substations, provided in <u>said</u> the main station;

<u>a data receiver</u> means for receiving which receives said data, provided in said one or more the substations;

a message transmitter means for transmitting which transmits a message addressed to all of said one or more substations after said data are transmitted, to inquire whether reception was normal, provided in said main station; and

a response transmitter means for transmitting which transmits a carrier as a response message to said query message, only when said data could not be received normally, provided in said one or more substations.

Claim 2 (Currently Amended): The data communication system, according to Claim 1, wherein said main station receives said <u>carrier</u> response message within a prescribed period of time after the transmission of said query message.

sub >

Claim 3 (Original): The data communication system, according to Claim 2, wherein said prescribed period of time is the period until the time to start the next transmission of said data.

Claim 4 (Currently Amended): The data communication system, according to Claim 2, wherein said main station determines that all of said <u>one or more</u> substations wee able to receive said data normally, when said main station does not receive said <u>carrier</u> response message within said prescribed period of time.

Claim 5 (Currently Amended): The data communication system, according to Claim 4, wherein said main station effects the next data transmission when said <u>carrier response message</u> is not received within said prescribed period of time.

Claim 6 (Currently Amended): The data communication system, according to Claim 2, wherein said main station determines that any of said <u>one or more</u> substations was unable to receive said data normally, when said main station receives said <u>carrier</u> response message within said prescribed of time.

Claim 7 (Currently Amended): The data communication system, according to Claim 6, wherein said main station re-transmits said data when said <u>carrier</u> response message is received within said prescribed period of time.

Claim 8 (Currently Amended): The data communication system, according to Claim 7, wherein said main station terminates the transmission of said data and effects the transmission of next data when said <u>carrier response message</u> is received after the same data have been transmitted a prescribed number of times.

/ v

Claim 9 (Currently Amended): The date communication system, according to Claim 8, wherein said main station changes comprises means for changing said prescribed number of times.

Claim 10 (Currently Amended): The data communication system, according to Claim 1, wherein said one or more substations, when said normally received data are received once more, scrap these data.

Claim 11 (Currently Amended): The data communication system, according to Claim 1, wherein said <u>one or more</u> substations, when said data that could not be normally received are received once more, take up these data.

Claim 12 (Cancelled).

Claim 13 (Cancelled).
